PROCEDURES FOR COLLECTION & FORWARDING OF SAMPLES FOR DNA FINGERPRINTING ANALYSIS

DNA fingerprinting technology today has made it possible to identify the source of biological samples found at scenes of crime and also to resolve disputes of Paternity and Maternity. The Laboratory of DNA Fingerprinting Services of **CDFD** provides services to various investigating agencies to resolve cases of Maternity / Paternity disputes, Identification of rapist(s), linking the suspects to biological evidence found at the crime scene in murder cases, Identification of mutilated remains of deceased, Identification of missing child, child-swapping cases in hospital wards. This leaflet has been prepared to disseminate information to the investigating officers/judicial authorities/medical officers about the process of evidence collection, preservation and forwarding the samples for DNA fingerprinting analysis. The procedures described here are simple, time tested and most suitable for Indian conditions. The samples should be collected in the way prescribed below and sent to **CDFD**.

For the establishment of maternity/paternity, we require the bloodstains of the mother, disputed child and the alleged/suspected biological father

For the Identification of rapist in sexual assault cases, we require the forensic exhibits (viz., garment, vaginal swabs and slides) along with the bloodstains of the suspect(s) and victim.

For the Identification of deceased, we require the bloodstains of the nearest relatives (viz., mother, father, brother, sister and children) along with the material objects of the deceased like teeth, post-mortem blood, muscle tissue, bone, hair with root and other material relevant to the case.

The bloodstains can be made using lancet on FTA cards being sent by us, in the presence of Hon'ble Court Authorities. These stains should be air-dried and sent to us. The procedure for collection and shipment of bloodstains on FTA cards are given in the annexure.

The forensic exhibits should be sent as mentioned below:

| | |
|--|---|
| Bloodstains | Wrapped with a dry paper or cloth |
| Muscle tissues | About 100 gms of muscle tissue should be sent in a clean glass bottle/plastic container with 0.9% DNS (normal saline sold in medical shops) on ice or in a crystal salt (sodium chloride) as a preservative. Tissue samples should not be preserved in formalin. |
| Vaginal swabs | The dry cotton swab should be placed in a clean dry glass vial/bottle |
| Teeth, Hair with root and Bones (intact) | Wrapped with a dry paper or cloth Complete burnt bones, pieces of bones and decomposed tissue are not useful for analysis |

All the samples should be properly collected & sealed and sent to CDFD under certification along with specimen seal for comparison. The samples should reach CDFD between 10:00 am to 5:00 pm on any working day (Monday to Friday).
